Washington, D.C. 20231

APPLICATION TRANSMITTAL LETTER

Transmitted herewith for filing under 35 U.S.C. §111(a) and 37 C.F.R. § 1.53(b) is a new utility patent application of:

Inventor(s): Jay S. WALKER, Andrew S. VAN LUCHENE

For: METHOD AND APPARATUS FOR FACILITATING THE PLAY OF FRACTIONAL LOTTERY TICKETS

UTILIZING POINT-OF-SALE TERMINALS

☒ This application is a:

☐ CONTINUATION

☒ CONTINUATION-IN-PART

☐ DIVISIONAL

of prior application no.: 08/920,116, filed August 26, 1997, which is a continuation-in-part of prior application no 08/822,709 , filed March 21, 1997.

☒ With respect to the inventorship of the co-pending parent application, from which this application claims benefit under 35 U.S.C. §120, the inventor(s) in this application is (are) less than those named in the copending parent application and the following inventor(s) should be deleted from this application:

Inventor(s) James A. JORASCH and Sanjay K. JINDAL

Papers Enclosed:

Enclosed are:

X	36 Page Application, including 12 pages of claims and 1 page of Abstract
X	13 Sheets of drawing(s)/Formal Figs. 1-13
X	Express Mail Certificate
To Follow	An Assignment of the invention to Walker Asset Management Limited Partnership with recordation cover sheet
To Follow	Verified Statement Claiming Small Entity Status
	Information Disclosure Statement, PTO-1449 and cited references
X	Combined Declaration and Power of Attorney (unexecuted)
	Preliminary Amendment
	Other:

Fee Calculation:

The filing fee has been calculated as shown below:

		(Col. 1)	(Col. 2)		SMALL ENTITY		OR	LARGE ENTITY	
FOR:		NO. FILED	NO. EXTRA		RATE	FEE	OR	RATE	FEE
BASIC FEE						$395	OR		$790
TOTAL CLAIMS		36 -20 =	16		X $11 =	$176	OR	X$22 =	$0
INDEPENDENT CLAIMS		12 -3 =	9		X $41 =	$369	OR	X$82 =	$0
	MULTIPLE DEPENDENT CLAIM PRESENTED: 0				X$135 =	$0	OR	X$260 =	$0
*If the difference in Col. 1 is less than zero, enter "0" in Col. 2					TOTAL	$940	OR	TOTAL	

Method of Payment:

☒ Please charge $ 940.00 to Deposit Account No. _____. A duplicate copy of this paper is enclosed.

☒ The Assistant Commissioner is hereby authorized to charge any fees under 37 CFR 1.16 or 1.17 which may be required during the pendency of this application, or to credit any overpayment, to Deposit Account No. _____.

METHOD AND APPARATUS FOR FACILITATING
THE PLAY OF FRACTIONAL LOTTERY TICKETS
UTILIZING POINT-OF-SALE TERMINALS

5   The present application is a continuation-in-part application of co-pending Patent

Application No. 08/920,116, entitled METHOD AND SYSTEM FOR PROCESSING

SUPPLEMENTARY PRODUCT SALES AT A POINT-OF-SALE TERMINAL, filed on

August 26, 1997, which is a continuation-in-part of co-pending Patent Application No.

08/822,709, entitled SYSTEM AND METHOD FOR PERFORMING LOTTERY

10   TICKET TRANSACTIONS UTILIZING POINT-OF-SALE TERMINALS, filed on

March 21, 1997, each of which are incorporated herein by reference.

CROSS REFERENCE TO CO-PENDING APPLICATIONS

       The present invention is related to the following United States Patent Applications

15   filed contemporaneously herewith:

       U.S. Patent Application Ser. No. _____, entitled METHOD AND

APPARATUS FOR CONTROLLING OFFERS THAT ARE PROVIDED AT A POINT-

OF-SALE TERMINAL (Attorney Docket No. WD2-97-564), U.S. Patent Application

Ser. No. _____, entitled METHOD AND APPARATUS FOR PROCESSING A

20   SUPPLEMENTARY PRODUCT AT A POINT-OF-SALE TERMINAL (Attorney

Docket No. WD2-97-561), U.S. Patent Application Ser. No. _____, entitled

METHOD AND APPARATUS FOR CONTROLLING THE PERFORMANCE OF A

SUPPLEMENTARY PROCESS AT A POINT-OF-SALE TERMINAL (Attorney

Docket No. WD2-97-557), and U.S. Patent Application Ser. No. _____,

25   entitled METHOD AND APPARATUS FOR PROCESSING A SUPPLEMENTARY

PRODUCT SALE AT A POINT-OF-SALE TERMINAL (Attorney Docket No. WD2-97-559), each assigned to the assignee of the present invention and incorporated by reference herein.

5

FIELD OF THE INVENTION

The present invention relates to point-of-sale terminals, and more specifically to point-of-sale terminals that facilitate the purchase of lottery tickets.

10

BACKGROUND OF THE INVENTION

Lotteries are extremely popular games that generate significant revenues for sponsoring states that offer such games. In a typical lottery, a player (ticket holder) purchases a lottery ticket having ticket numbers and a serial number inscribed thereon.

15 The ticket numbers allow both the ticket holder and a lottery agent to identify whether the ticket holder has won a prize. The serial number uniquely identifies the lottery ticket, and is typically recorded by a lottery agency so that the lottery ticket may be validated. For example, the serial number may be used to verify whether the ticket numbers inscribed on a ticket match those ticket numbers that the lottery agency has recorded as

20 associated with that lottery ticket.

A typical lottery ticket has six ticket numbers, each selected from a range, such as the range of from one to forty-nine. The six ticket numbers may have been selected by the ticket holder or, at the request of the ticket holder, randomly selected by the lottery

2

terminal printing the ticket. On a drawing date, the lottery agency randomly selects six

ticket numbers, which are deemed "winning" ticket numbers. A lottery ticket having

ticket numbers that match some or all of the winning ticket numbers is a winning ticket,

and the corresponding holder of the lottery ticket wins a prize.

5   The grandparent application of the present application, Patent Application No.

08/822,709, entitled SYSTEM AND METHOD FOR PERFORMING LOTTERY

TICKET TRANSACTIONS UTILIZING POINT-OF-SALE TERMINALS, filed on

March 21, 1997, discloses a system and method by which fractional lottery tickets may

be sold to a customer at a point-of-sale ("POS") terminal in exchange for change due.

10 For example, a customer may bring a purchase to a POS terminal, and the POS terminal

may calculate the purchase price to be $4.74. If the purchase price is rounded to the

nearest $1, the change due is $5.00 - $4.74 = $0.26. Accordingly, the customer may be

sold a 26% share of a $1 lottery ticket in lieu of the change due. If the lottery ticket wins,

26% of the corresponding prize is awarded to the customer.

15   There are numerous advantages to providing a fractional lottery ticket in

exchange for change due. As described in the parent application of the present

application, Patent Application No. 08/920,116, entitled METHOD AND SYSTEM FOR

PROCESSING SUPPLEMENTARY PRODUCT SALES AT A POINT-OF-SALE

TERMINAL, filed on August 26, 1997, dispensing and collecting coins is costly and

20 burdensome. Furthermore, many customers consider coins to be dirty, and would prefer

not to handle them. Thus, many customers will find the exchange of change due for a

fractional lottery ticket to be very desirable.

Unfortunately, some state lottery agencies may be reluctant to change their practices by issuing lottery tickets for fractional amounts. Such state lottery agencies may instead prefer to offer tickets in only a few predetermined, rounded amounts, such as tickets for $1, $2 and $5 only. In some circumstances, the ability to offer fractional

5 lottery tickets may require substantial modifications to the hardware and software of lottery terminals used throughout one or more states. Although such changes may ultimately be profitable, the initial cost may be perceived to be unduly burdensome, and the eventual profit to be made may appear too speculative. In summary, the issuance of fractional lottery tickets by state lottery agencies may not be practical in all

10 circumstances.

Accordingly, it would be advantageous to facilitate the purchase of fractional lottery tickets without requiring significant changes in existing lottery systems.

SUMMARY OF THE INVENTION

15 It is an object of the present invention to facilitate the purchase of fractional lottery tickets without requiring significant changes to existing lottery systems.

In accordance with the present invention, a store controller determines a monetary value, such as an amount of spare change due to a customer, and allocates a portion of a lottery ticket for the customer based on the monetary value. The portion may be, for

20 example, equal to the monetary value, or may be the monetary value rounded to the nearest nickel. The store controller outputs a ticket identifier that identifies the lottery ticket (e.g. a serial number) and a portion identifier that identifies the allocated portion of the lottery ticket (e.g. $0.34 of a $2.00 lottery ticket). Typically, the store controller

4

outputs the identifiers to a POS terminal, which prints a fractional lottery ticket redeemable for a portion of the lottery ticket's prize. The store controller also stores the ticket identifier and the portion identifier, to assure that fraudulent tickets will be detected.

5   After a drawing date for the lottery ticket, the customer redeems the fractional lottery ticket, typically at a POS terminal, if a prize is due. The POS terminal communicates with the store controller, which receives the ticket identifier and the portion identifier therefrom. From the received identifiers, the store controller may determine a prize value of the corresponding lottery ticket. The customer is, in turn,

10   provided with a portion of the prize value based on the allocated portion of the ticket.

BRIEF DESCRIPTION OF THE DRAWINGS

       FIG. 1 is a schematic illustration of a network of POS terminals provided in accordance with the present invention.

15   FIG. 2 is a schematic illustration of a store controller of the network of FIG. 1.

       FIG. 3 is a schematic illustration of a POS terminal of the network of FIG. 1.

       FIG. 4 is a schematic illustration of an alternate embodiment of a POS terminal of the network of FIG. 1.

       FIG. 5 is a schematic illustration of a ticket supply database of the store controller

20   of FIG. 2.

       FIG. 6 is a schematic illustration including exemplary data for the ticket supply database of FIG. 5.

FIG. 7 is a schematic illustration of a transaction database of the store controller of FIG. 2.

FIG. 8 is a schematic illustration of records of a fractional ticket database of the store controller of FIG. 2.

FIG. 9 is a schematic illustration including further exemplary data for the ticket supply database of FIG. 5.

FIG. 10 is a flow chart illustrating a method for allocating portions of lottery tickets.

FIG. 11 is a schematic illustration of a winning lottery ticket database of the store controller of FIG. 2.

FIG. 12 is a schematic illustration of a frequent shopper database of the store controller of FIG. 2.

FIG. 13 is a flow chart illustrating a method for redeeming a fractional lottery ticket.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

In accordance with the present invention, a business may acquire a lottery ticket, and allocate a portion of the lottery ticket to a customer. A share of any prize that is won with the lottery ticket is provided to the customer, the share of the prize corresponding to the allocated portion of the lottery ticket. For example, if a customer receives a $0.34 portion of a $2.00 lottery ticket, then the customer receives 17% ($0.34 / $2.00 = 17%) of the prize derived from the lottery ticket. A portion of a lottery ticket may be expressed as a monetary value, such $0.34, and may be expressed as a percentage, such as 17%.

Typically, the business will acquire a group of lottery tickets and allocate portions of those lottery tickets to customers as needed. The prizes derived from the group of lottery tickets are received by the business, which in turn pays shares of the prizes to customers based on the allocated portions. Since the business need only purchase

5   conventional lottery tickets, the business may facilitate the play of fractional lottery tickets without requiring significant changes in existing lottery agency practices.

The portion of the lottery ticket allocated to the customer may be based on a change amount that is due in connection with a transaction at a POS terminal. Such an embodiment is advantageous since many customers will welcome an alternative to

10   receiving change. Moreover, receiving something having a high perceived value, such as a fractional lottery ticket, instead of change can be even more attractive to customers.

Referring to FIG. 1, a network 8 comprises a store controller 10, which is in communication with a lottery server 12 and with POS terminals 14, 16, 18 and 20. The POS terminals 14, 16, 18 and 20, which are typically cash registers or other terminals,

15   may initiate and/or complete fractional lottery ticket transactions. Although four POS terminals are shown in FIG. 1, any number of POS terminals may be in communication with the store controller 10. The POS terminals 14, 16, 18 and 20 may be located in the same store, in different stores of a chain of stores, or in other locations.

The store controller 10 directs the operation of, stores data from and transmits

20   data to the POS terminals 14, 16, 18 and 20. The store controller 10 may itself be a POS terminal or may be another computing device that can communicate with one or more POS terminals. The lottery server 12 is typically controlled by a state lottery agency, and responds to requests from the store controller 10. For example, the lottery server 12 may

issue lottery tickets as requested by the store controller 10, and may provide the winning numbers for a drawing date.

Referring to FIG. 2, the store controller 10 of FIG. 1 comprises a processor 22, such as one or more conventional microprocessors. The processor 22 is in

5   communication with a data storage device 24, such as an appropriate combination of magnetic, optical and/or semiconductor memory. The processor 22 and the storage device 24 may each be (i) located entirely within a single computer or other computing device; (ii) connected to each other by a remote communication link, such as a serial port cable, telephone line or radio frequency transceiver; or (iii) a combination thereof. For

10   example, the store controller 10 may comprise one or more computers that are connected to a remote server computer for maintaining databases.

The storage device 24 stores a program 26 for controlling the processor 22. The processor 22 performs instructions of the program 26, and thereby operates in accordance with the present invention, and particularly in accordance with the methods described in

15   detail herein. The program 26 furthermore includes program elements that may be necessary, such as an operating system and "device drivers" for allowing the processor 22 to interface with computer peripheral devices. Appropriate device drivers and other necessary program elements are known to those skilled in the art, and need not be described in detail herein.

20   The storage device 24 also stores (i) a ticket supply database 30;

(ii) a transaction database 32; (iii) a fractional ticket database 34; (iv) a winning lottery ticket database 36; and (v) a frequent shopper database 38. The databases 30, 32, 34, 36 and 38 are described in detail below and depicted with exemplary entries in the

8

accompanying figures. As will be understood by those skilled in the art, the schematic

illustrations of and accompanying descriptions of the databases presented herein are

exemplary arrangements for stored representations of information. A number of other

arrangements may be employed besides the tables shown. Similarly, the illustrated

5   entries represent exemplary information, but those skilled in the art will understand that

the number and content of the entries can be different from those illustrated herein.

        Referring to FIG. 3, a schematic illustration of a POS terminal 40 is descriptive of

the POS terminals 14, 16, 18 and 20 of FIG. 1. The POS terminal 40 comprises a

processor 42, such as one or more conventional microprocessors. The processor 42 is in

10   communication with a data storage device 44, such as an appropriate combination of

magnetic, optical and/or semiconductor memory. The processor 42 and the storage

device 44 may each be (i) located entirely within a single computer or other computing

device; (ii) connected to each other by a remote communication link, such as a serial port

cable, telephone line or radio frequency transceiver; or (iii) a combination thereof. For

15   example, the POS terminal 40 may comprise one or more computers which are connected

to a remote server computer for maintaining databases.

        An input device 46, a printer 48 and a display device 50 are each in

communication with the processor 42. The input device 46 preferably comprises a

keypad for transmitting input signals, such as signals indicative of a purchase, to the

20   processor 42. The input device 46 may also comprise an optical bar code scanner for

reading bar codes and transmitting signals indicative of those bar codes to the processor

42. The printer 48 is for registering indicia on paper or other material, thereby printing

fractional lottery tickets as commanded by the processor 42. The display device 50 is

preferably a video monitor for displaying at least alphanumeric characters to the customer and/or a cashier operating the POS terminal 40. Many types of input devices, printers and display devices are known to those skilled in the art, and need not be described in detail herein.

5   The storage device 44 stores a POS terminal program 52 for controlling the processor 42. The processor 42 performs instructions of the POS terminal program 52, and thereby operates in accordance with the present invention, and particularly in accordance with the methods described in detail herein. The POS terminal program 52 furthermore includes program elements that may be necessary, such as an operating

10   system and "device drivers" for allowing the processor 42 to interface with computer peripheral devices, such as the input device 46, the printer 48 and the display device 50. Appropriate device drivers and other necessary program elements are known to those skilled in the art, and need not be described in detail herein.

FIG. 4 illustrates an alternate embodiment of a POS terminal 58, which is

15   descriptive of the POS terminals 14, 16, 18 and 20 of FIG. 1. A control device 60 is in communication via a communication medium 62 with a system 64 for printing fractional lottery tickets, receipts and/or coupons. The control device 60 comprises a processor 66 that is in communication with the input device 46 (FIG. 3) and the display device 50 (FIG. 3). The system 64 for printing comprises a processor 68 in communication with

20   the storage device 44 (FIG. 3) and the printer 48 (FIG. 3). In this embodiment, the control device 60 may be a cash register, and the system 64 may be an electronic device for printing tickets in accordance with data received from the cash register. Other configurations of the POS terminal 40 will be understood by those skilled in the art.

The description that follows is arranged into the following sections: Allocating Portions of Lottery Tickets, Acquiring Additional Lottery Tickets, and Redeeming Portions of Lottery Tickets.

5 Allocating Portions of Lottery Tickets

Referring to FIG. 5, the ticket supply database 30 of FIG. 2 includes rows 80, 82, 84, 86 and 88, each of which represents an entry of the ticket supply database 30. Each entry defines a lottery ticket that is to be allocated, in which the allocated portions of the

10 lottery ticket are included in fractional lottery tickets. In particular, each entry includes (i) a ticket identifier 90 that uniquely identifies the entry, such as a serial number of the lottery ticket or a portion of the serial number; (ii) a drawing date 92 that indicates when winning ticket numbers will be announced; (iii) ticket numbers 94; (iv) an unallocated portion 96 of the lottery ticket; and (v) a ticket price 98, which indicates the total of the

15 unallocated portion 96 and any allocated portions. For any entry, the unallocated portion 96 and the ticket price 98 may be used to determine how much of the corresponding lottery ticket has been allocated. For example, referring to the entry 84, of the $1.00 ticket price, $0.23 remains unallocated. Accordingly, $0.77 ($1.00 - $0.23) has been allocated. A total remaining unallocated amount 100 indicates the sum of the unallocated

20 portions of all lottery tickets. Given the exemplary data shown in FIG. 4, the total remaining unallocated amount 100 is $1.54 ($0.12 + $0.31 + $0.23 + $0.78 + $0.10 = $1.54).

Referring to FIG. 6, exemplary data for the ticket supply database 30 (FIGS. 2 and 5) are shown before and after a portion of a lottery ticket has been allocated. The table 110 represents the ticket supply database 30 before a transaction represented by a round-up amount 130. The table 120 represents the ticket supply database 30 after the

5   transaction represented by the round-up amount 130. The round-up amount 130 has a value of $0.35, and corresponds to a transaction where a customer exchanges his change due ($0.35) for a fractional lottery ticket. The customer thus obtains a portion of a lottery ticket, and the portion is based on the monetary amount $0.35.

As described above, each of the entries shown in the table 110 corresponds to a

10   ticket. Except for the entry 135, the monetary amount $0.35 is greater than the unallocated portions of every entry. By contrast, the entry 135 has an unallocated portion of $0.78, and thus a $0.35 portion of the corresponding lottery ticket may be allocated therefrom. Accordingly, the lottery ticket corresponding to the entry 135 is selected, and a portion corresponding to $0.35 is allocated to make a new fractional lottery ticket.

15   The entry 135 represents the ticket "1234563" before the $0.35 portion is allocated therefrom. An entry 140 of the table 120 represents the ticket "1234563" after the $0.35 portion is allocated therefrom. The unallocated portion of the entry 140 is $0.43, which is the original $0.78 unallocated portion reduced by $0.35. Similarly, before the transaction represented by the round-up amount 130, the total remaining

20   unallocated amount (of all lottery tickets) is $1.54. After the transaction, the total remaining unallocated amount is $1.19, which is $1.54 reduced by $0.35.

Referring to FIG. 7, the transaction database 32 of FIG. 2 includes rows 150, 152, 154, 156 and 158, each of which represents an entry of the transaction database 32. Each

entry defines a transaction initiated by a POS terminal. In particular, each entry includes (i) a transaction number 160 that uniquely identifies the transaction; (ii) a POS terminal identifier 162 that uniquely identifies the POS terminal initiating the transaction; (iii) a purchase price 164; (iv) a rounding multiple 165 that is used to indicate an amount to

5   which the purchase price is to be rounded; (v) a round-up amount 166 that is the monetary amount used to purchase the fractional lottery ticket; (vi) an indication of whether the offer for a fractional lottery ticket was accepted 168; (vii) a frequent shopper number 170 identifying a customer who has used a frequent shopper card for the transaction; (viii) a date 172 of the transaction; and (ix) a fractional ticket identifier 174

10   that identifies a fractional lottery ticket provided in exchange for the round-up amount.

The round-up amount 166 is the monetary amount used to purchase the fractional lottery ticket. In some embodiments, round-up amount 166 is equal to the allocated portion of a lottery ticket. For example, a customer may have $0.62 in change (the round-up amount) from a purchase, and use that change to acquire a $0.62 portion of a

15   lottery ticket. However, the monetary amount used to purchase the fractional lottery ticket need not be equal to the allocated portion of the corresponding lottery ticket. In certain embodiments, the allocated portion of a lottery ticket is based on a rounded-down (or rounded-up) monetary amount. For example, a customer may have $0.62 in change from a purchase, and use that change to acquire a fractional lottery ticket. The fractional

20   lottery ticket may be based on an allocated $0.60 ($0.62 rounded down to the nearest nickel) portion of a lottery ticket. Of course, the monetary amount may be rounded down to other multiples, such as to the nearest dime, quarter or dollar, and that rounded amount would define the allocated portion of a lottery ticket. The difference between the change

13

due and the rounded-down amount upon which the fractional lottery ticket is based may, for example, be kept as a service fee by the seller of the fractional lottery ticket.

The allocated portion of a lottery ticket may be based on the monetary amount in still further ways. For example, the allocated portion may be double the monetary

5 amount. It may be advantageous to provide such a double-value allocated portion if a customer buys a predetermined good or type of good, or if the customer uses a frequent shopper card. For example, if a customer has $0.62 in change and purchases a product of a particular manufacturer, the customer receives a fractional lottery ticket that is based on an allocated $1.24 (double $0.62) portion of one or more lottery tickets in exchange for

10 his change.

Referring to FIG. 8, tables 180 and 190 represent records of the fractional ticket database 34 (FIG. 2). Typically, the fractional ticket database 34 includes a plurality of records such as those represented by the table 180 and 190. Each record of the fractional ticket database 34 defines a fractional lottery ticket, and each fractional lottery ticket

15 includes allocated portions of one or more lottery tickets.

The record represented by the table 180 defines a fractional lottery ticket that is identified by an identifier 185 (the identifier "1001"). The table 180 includes an entry 187, which defines a portion of a lottery ticket that is included in the fractional lottery ticket "1001". The entry 187 includes (i) a ticket identifier 182 that uniquely identifies

20 the lottery ticket; and (ii) a portion 184 indicating a portion of the lottery ticket that is included in the fractional lottery ticket "1001".

Similarly, the record represented by the table 190 defines a fractional lottery ticket that is identified by an identifier 195 (the identifier "1003"). The table 190

14

includes entries 197 and 198, which each include (i) a ticket identifier 192; and (ii) a

portion 194. Since the fractional lottery ticket "1003" includes portions from more than

one lottery ticket, the fractional lottery ticket "1003" may include allocated amounts

which collectively exceed the maximum price of one lottery ticket.

5   As described above, a fractional lottery ticket includes portions of one or more

lottery tickets. In certain embodiments, the lottery tickets are not chosen by the

customer, but are instead chosen automatically by the POS terminal or store controller 10

(FIG. 1). In such embodiments, a lottery ticket is selected from the plurality of lottery

tickets in the ticket supply database 30 (FIG. 2). The lottery ticket may be selected in

10   several ways. For example, a lottery ticket having an unallocated portion at least as great

as the monetary value may be selected. Similarly, a set of lottery tickets that each have

an unallocated portion at least as great as the monetary value may be determined. From

this set, the lottery ticket which has a minimal unallocated portion is selected. The

description below further clarifies this method of selecting a lottery ticket.

15   Referring to FIG. 9, a table 200 illustrates exemplary data for the ticket supply

database 30 (FIGS. 2 and 5). The table 200 includes entries 202, 204, 206 and 208. A

round-up amount 220 has a value of $0.60, and corresponds to a transaction where a

customer exchanges his change due ($0.60) for a fractional lottery ticket. The customer

thus obtains a portion of a lottery ticket, and the portion is based on the monetary amount

20    $0.60. To select the lottery ticket from which to allocate a portion, the store controller 10

determines a set of tickets that each have an unallocated portion of at least $0.60. This

set includes the entries 204, 206 and 208. From this set, the lottery ticket which has a

minimal unallocated portion is selected. Of the entries 204, 206 and 208, the entry 208

has the minimal unallocated portion ($0.61). Accordingly, the lottery ticket corresponding to the entry 208 is selected, and a $0.60 portion is allocated therefrom.

In other embodiments, the customer may select the ticket numbers himself at the time of the transaction, either manually or through numbers stored on a frequent shopper

5   card. One or more lottery tickets that include those ticket numbers would be acquired (e.g., by electronic request to the lottery server 12), added to the ticket supply database 30 (FIG. 2), and one or more portions thereof would be included in the fractional lottery ticket purchased by the customer. Such an embodiment allows a customer to obtain a fractional lottery ticket having his favorite or "lucky" numbers.

10   Once a fractional lottery ticket has been determined, the POS terminal prints for the customer a ticket indicative of the fractional lottery ticket, for example, on a receipt. The printed ticket serves as proof that the customer is entitled to the indicated portions of any prizes won by the indicated lottery tickets. Such a printed ticket may include the corresponding (i) fractional lottery ticket identifier, (ii) ticket numbers, (iii) allocated

15   portion(s) of the lottery ticket(s), (iv) transaction identifier, and (v) an encrypted code based on a combination thereof. Such an encrypted code may be used to verify that the printed ticket is unaltered. Encryption techniques are described in "Applied Cryptography: Protocols, Algorithms and Source Code in C, Second Edition", by Bruce Schneier, published 1996. Those skilled in the art will understand that the encrypted

20   code will be determined by a cryptographic algorithm such that it would be almost impossible for a forger to generate a valid code, much less a code that indicates a winning lottery ticket.

The printed ticket may also include contractual language, such as provisions assigning to the customer the right and title in and to the indicated portions of any prizes won by the indicated lottery tickets. Still further matter such as the drawing date and an expiration date of the fractional lottery ticket may be included on the printed ticket, as

5   will be understood by those skilled in the art. It may be further desirable to print a bar code that indicates any or all of the above information, thereby facilitating entry of the information using a bar code scanner.

Referring to FIG. 10, a method 240 for allocating portions of lottery tickets initiates by determining a monetary value (step 242). For example, a POS terminal may

10   calculate an amount of change due and round this amount down to the nearest dime. The POS terminal transmits the rounded amount to the store controller, and the store controller thereby determines the monetary value to be this rounded amount. The store controller in turn allocates a portion of a lottery ticket, the portion being based on the monetary value (step 244). The store controller then outputs (i) a ticket identifier that

15   identifies the lottery ticket, and (ii) a portion identifier that identifies the allocated portion of the lottery ticket (step 246). For example, the store controller typically transmits the ticket identifier and the portion identifier to the POS terminal, and the POS terminal in turn prints a fractional lottery ticket based on the transmitted identifiers, as described above. The store controller also stores the ticket identifier and the portion identifier (step

20   248), for example, in the fractional ticket database 34 (FIG. 2), for authentication purposes.

Acquiring Additional Lottery Tickets

17

As described above, portions of lottery tickets from the supply of lottery tickets are allocated. After an allocation, it is possible that a lottery ticket will have an unallocated portion of $0.00. In other words, the entire lottery ticket will have been allocated, and no further portions of the lottery ticket remain to be allocated.

In addition, after an allocation, it is possible that no single lottery ticket has an unallocated portion which is sufficient to satisfy a particular request (or an anticipated request) for a fractional lottery ticket. For example, there may be an attempt to allocate a $0.35 portion of a lottery ticket, yet no lottery ticket represented in the ticket supply database 30 (FIG. 2) has an unallocated portion of $0.35 or more. In such a situation, it may be possible to allocate portions from a plurality of lottery tickets, such that the portions collectively equal $0.35. However, it may be desirable to allocate a portion from a single lottery ticket, rather than from many. For example, it is simpler for a customer to track one set of ticket numbers, rather than a plurality of sets of ticket numbers.

Accordingly, it is advantageous to acquire additional lottery tickets for the supply of lottery tickets. It is particularly advantageous to acquire additional lottery tickets at a time before the lottery tickets are needed, so as not to introduce undue delays into a transaction. Additional tickets may be acquired in predetermined amounts to reduce time spent acquiring lottery tickets. For example, thirty tickets may be acquired at once. In addition, the predetermined amount may depend on criteria such as the number of POS terminals in use. Additional lottery tickets may be acquired by purchasing "quick pick"

18

tickets (Tickets with randomly selected ticket numbers) from the state lottery in a known manner.

In one embodiment, the store controller 10 (FIG. 1) counts the number of tickets that have an unallocated portion that is above a first predetermined threshold. For

5 example, the store controller 10 may count the number of tickets that have an unallocated portion that is above $0.50. This number is compared with a second predetermined threshold, and one or more additional lottery tickets are acquired if this number is below the second predetermined threshold. For example, if there are less than ten lottery tickets having unallocated portions above $0.50, additional lottery tickets are acquired.

10 In another embodiment, the store controller 10 (FIG. 1) counts the number of tickets that have an unallocated portion that is above a requested portion. For example, a POS terminal may request a $0.40 fractional lottery ticket from the store controller. The store controller 10 then counts the number of tickets that have an unallocated portion that is above $0.40. This number is compared with a predetermined threshold, and one or

15 more additional lottery tickets are acquired if this number is below the predetermined threshold. For example, if there are less than eight lottery tickets having unallocated portions above $0.40, additional lottery tickets are acquired.

In another embodiment, the store controller 10 (FIG. 1) calculates the sum of the unallocated portions of all tickets. If the sum is below a predetermined threshold,

20 additional tickets are acquired. For example, if the total remaining unallocated amount is below $10.00, a block of thirty additional tickets are acquired.

Redeeming Portions of Lottery Tickets

19

The business or other entity acquiring and maintaining the supply of lottery tickets may check each to determine whether any are winning tickets. If so, the business preferably redeems the winning tickets for prizes as soon as practical, so that the prizes

5   may be used to pay those customers that have corresponding fractional lottery tickets. Winning ticket numbers may be entered manually into the store controller 10 (FIG. 1) when available. Ideally, the store controller 10 will receive from the lottery server 12 (FIG. 1) the winning ticket numbers for each drawing date. The store controller can store these winning ticket numbers in the winning lottery ticket database 36 (FIG. 2).

10   Referring to FIG. 11, the winning lottery ticket database 36 includes entries 260, 262 and 264, each defining winning ticket numbers for a drawing date. Each entry includes (i) a corresponding drawing date 266, (ii) winning ticket numbers 268, and (iii) a prize 270. The winning lottery ticket database 36 should include entries for all drawing dates corresponding to valid and redeemable fractional lottery tickets. For example, if

15   fractional lottery tickets may be redeemed up to one year after the corresponding drawing date, then the entries for each drawing date of at least the past year should be stored. The prize 270 may be, for example, the prize won upon matching all winning ticket numbers. More prizes may be specified for each entry. For example, a prize for matching only five of six winning ticket numbers may be specified for each entry as well.

20   When winning ticket numbers for a drawing date are received by the store controller 10 (FIG. 1), the store controller 10 may simply store them in the winning lottery ticket database 36, where they are accessed when fractional lottery tickets are redeemed by customers. However, the store controller 10 may also determine which

20

fractional lottery tickets include portions of a winning lottery ticket. Then the corresponding records of the fractional ticket database 34 (FIG. 2) may be modified to indicate that the fractional lottery tickets include portions of winning lottery tickets. In addition, if those fractional lottery tickets were purchased using frequent shopper cards,

5   then the corresponding customer may be notified.

Referring to FIG. 12, the frequent shopper database 38 includes entries 280, 282, 284 and 286, each defining a frequent shopper (a customer who has used a frequent shopper card for the transaction). In particular, each entry includes (i) a frequent shopper number 288 for uniquely identifying the frequent shopper; (ii) an address 290 of the

10   frequent shopper; (iii) a telephone number 292 of the frequent shopper; (iv) a name 294 of the frequent shopper; and (v) an email address 296 of the frequent shopper. With such stored information, frequent shoppers may be notified by mail, telephone call, email or other forms of notification as desired. In addition, frequent shoppers may be notified by the POS terminal when they next use their frequent shopper card. Providing frequent

15   shopper with the additional benefit of notification is advantageous because it may prompt customers to become frequent shoppers. Consequently, these customers are more likely to continue frequenting the corresponding business.

To redeem a fractional lottery ticket, a customer preferably provides the printed ticket to show that he is entitled to the indicated share of the prize. The printed ticket is

20   verified to assure that it is valid and unaltered. For example, if the printed ticket is valid, the fractional lottery ticket identifier inscribed on the printed ticket indicates a record in the fractional ticket database. That record should in turn indicate corresponding information on the printed ticket. In addition, the encrypted code can be verified.

21

Referring to FIG. 13, a method 300 for redeeming a fractional lottery ticket

initiates by receiving (i) a ticket identifier that identifies a lottery ticket, and (ii) a portion

identifier that identifies an allocated portion of the lottery ticket (step 302). Such

identifiers may be received by manually entering one or more identifiers into a POS

5   terminal, from which the identifiers are transmitted to the store controller 10 (FIG. 1).

Alternatively, a bar code scanner of the POS terminal may read a bar code on the printed

ticket, and transmit the bar code to the store controller 10. The entered identifier or bar

code may be indicative of the fractional lottery ticket identifier, which may be used to

retrieve a corresponding ticket identifier and portion identifier from the fractional ticket

10   database 34 (FIG. 2). The store controller thus receives the ticket identifier and portion

identifier.

Once the identifiers are received, thereby identifying one or more lottery tickets

and allocated portions thereof, a prize value of the lottery tickets is determined (step 304).

As discussed above, the prize value may be determined by comparing ticket numbers of a

15   lottery ticket with winning ticket numbers stored in the winning lottery ticket database 36

(FIG. 2). As also described above, the portion of the prize that is to be provided to the

customer is determined by the allocated portion of the lottery ticket. This portion of the

prize is provided to the customer (step 306), typically by providing cash from a cash

register or by writing or printing a check made out to the customer.

20   A winning lottery ticket may have an unallocated portion greater than zero. Such

a winning lottery ticket will have an associated portion of the prize value that is not to be

paid to customers. This portion of the prize is instead retained by the business, and may

be used to finance various customer incentives. For example, a portion of retained prize

22

value may be provided back to customers in the form of fractional lottery tickets (e.g., $0.05 of change buys a $0.50 fractional lottery ticket).

The business may retain further winnings by providing winning tickets with portions of certain prize values. For example, customers may only be provided with

5 shares of "jackpot" prizes (e.g. matching all six winning ticket numbers). Any other prizes are retained by the business. Of course, such restrictions would typically be explained to the customers through advertising and printed information on the fractional lottery ticket.

Although the present invention has been described with respect to a preferred

10 embodiment thereof, those skilled in the art will note that various substitutions may be made to those embodiments described herein without departing from the spirit and scope of the present invention. For example, the present invention is applicable to many types of games besides lotteries in which prizes are awarded. In addition, in some embodiments the data stored on the store controller may instead be stored among the POS

15 terminals. Similarly, some of the functions performed by the store controller may be performed by the POS terminal, and vice versa.

What is claimed is:

1   1.   A method for facilitating the purchase of fractional lottery tickets using a point-

2   of-sale terminal, comprising:

3   determining a monetary value;

4   allocating a portion of a ticket, the portion being based on the monetary value;

5   outputting a ticket identifier that identifies the ticket and a portion identifier that

6   identifies the allocated portion of the ticket; and

7   storing the ticket identifier and the portion identifier.

1   2.   The method of claim 1, in which the step of determining a monetary value

2   comprises:

3   determining a monetary value based on an amount of change due for a purchase.

1   3.   The method of claim 1, further comprising:

2   selecting the ticket from a plurality of tickets.

1   4.   The method of claim 3, in which the step of selecting the ticket from a plurality of

2   tickets comprises:

3   selecting a ticket having an unallocated portion at least as great as the monetary

4   value.

1   5.   The method of claim 3, in which the step of selecting the ticket from a plurality of

2   tickets comprises:

24

3   determining a set of tickets that each have an unallocated portion at least as great

4 as the monetary value; and

5   selecting a ticket from the set of tickets which has a minimal unallocated portion.

1 6. An apparatus for facilitating the purchase of fractional lottery tickets using a

2 point-of-sale terminal, comprising:

3   a storage device; and

4   a processor connected to the storage device,

5   the storage device storing

6   a program for controlling the processor; and

7   the processor operative with the program to:

8   determine a monetary value;

9   allocate a portion of a ticket, the portion being based on the monetary

10 value;

11   output a ticket identifier that identifies the ticket and a portion identifier

12 that identifies the allocated portion of the ticket; and

13   store the ticket identifier and the portion identifier in the storage device.

1 7. The apparatus of claim 6, in which the processor is further operative with the

2 program to:

3   determine a monetary value based on an amount of change due for a purchase.

1   8.   The apparatus of claim 6, in which the processor is further operative with the

2   program to:

3   select the ticket from a plurality of tickets.

1   9.   The apparatus of claim 8, in which the processor is further operative with the

2   program to:

3   select a ticket having an unallocated portion at least as great as the monetary

4   value.

1   10.   The apparatus of claim 8, in which the processor is further operative with the

2   program to:

3   determine a set of tickets that each have an unallocated portion at least as great as

4   the monetary value; and

5   select a ticket from the set of tickets which has a minimal unallocated portion.

1   11.   A method for facilitating the purchase of fractional lottery tickets using a point-

2   of-sale terminal, comprising:

3   determining a monetary value;

4   allocating a portion of each ticket of a plurality of tickets, the portion of each

5   ticket being associated with a portion of the monetary value;

6   outputting a plurality of ticket identifiers that identify the plurality of tickets and a

7   plurality of portion identifiers that identify the allocated portions of each ticket; and

8   storing the ticket identifiers and the portion identifiers.

1   12.   An apparatus for facilitating the purchase of fractional lottery tickets using a

2   point-of-sale terminal, comprising:

3   a storage device; and

4   a processor connected to the storage device,

5   the storage device storing

6   a program for controlling the processor; and

7   the processor operative with the program to:

8   determine a monetary value;

9   allocate a portion of each ticket of a plurality of tickets, the portion of each

10   ticket being associated with a portion of the monetary value;

11   output a plurality of ticket identifiers that identify the plurality of tickets

12   and a plurality of portion identifiers that identify the allocated portions of each ticket; and

13   store the ticket identifiers and the portion identifiers in the storage device.

1   13.   A method for facilitating the purchase of fractional lottery tickets using a point-

2   of-sale terminal, comprising:

3   determining an amount of change due for a purchase;

4   determining a monetary value based on the amount of change due;

5   selecting a ticket from a plurality of tickets, the selected ticket having an

6   unallocated portion at least as great as the monetary value;

7   allocating at least a portion of the selected ticket, the portion being based on the

8   monetary value;

9   outputting a ticket identifier that identifies the ticket and a portion identifier that

10   identifies the allocated portion of the selected ticket; and

11   storing the ticket identifier and the portion identifier.

1   14.   The method of claim 13, in which the step of determining a monetary value

2   comprises:

3   rounding the amount of change due to a predetermined multiple, thereby

4   generating a rounded change amount; and

5   setting the monetary value equal to the rounded change amount.

1   15.   The method of claim 14, in which the step of rounding the amount of change due

2   comprises:

3   rounding down the amount of change due to a predetermined multiple, thereby

4   generating a rounded-down change amount.

1   16.   The method of claim 13, further comprising:

2   outputting an offer to exchange a fractional lottery ticket for change due.

1   17.   An apparatus for facilitating the purchase of fractional lottery tickets using a

2   point-of-sale terminal, comprising:

3   a storage device; and

4   a processor connected to the storage device,

5   the storage device storing

6   a program for controlling the processor; and

7   the processor operative with the program to:

8   determine an amount of change due for a purchase;

9   determine a monetary value based on the amount of change due;

10   select a ticket from a plurality of tickets, the selected ticket having an

11   unallocated portion at least as great as the monetary value;

12   allocate at least a portion of the selected ticket, the portion being based on

13   the monetary value;

14   output a ticket identifier that identifies the ticket and a portion identifier

15   that identifies the allocated portion of the selected ticket; and

16   store the ticket identifier and the portion identifier in the storage device.

1   18.   The apparatus of claim 17, in which the processor is further operative with the

2   program to:

3   round the amount of change due to a predetermined multiple, thereby generating a

4   rounded change amount; and

5   set the monetary value equal to the rounded change amount.

1   19.   The apparatus of claim 18, in which the processor is further operative with the

2   program to:

3   round down the amount of change due to a predetermined multiple, thereby

4   generating a rounded-down change amount.

1   20.   The apparatus of claim 17, in which the processor is further operative with the

2   program to:

3   output an offer to exchange a fractional lottery ticket for change due.

1   21.   A method for facilitating the purchase of fractional lottery tickets using a point-

2   of-sale terminal, comprising:

3   receiving a ticket identifier that identifies a ticket and a portion identifier that

4   identifies an allocated portion of the ticket;

5   determining a prize value of the ticket; and

6   determining a portion of the prize value based on the allocated portion of the

7   ticket.

1   22.   An apparatus for facilitating the purchase of fractional lottery tickets using a

2   point-of-sale terminal, comprising:

3   a storage device; and

4   a processor connected to the storage device,

5   the storage device storing

6   a program for controlling the processor; and

7   the processor operative with the program to:

8   receive a ticket identifier that identifies a ticket and a portion identifier

9   that identifies an allocated portion of the ticket;

10   determine a prize value of the ticket; and

30

11   determine a portion of the prize value based on the allocated portion of the

12 ticket.

1 23. A method for facilitating the purchase of fractional lottery tickets using a point-

2 of-sale terminal, comprising:

3   determining a monetary value;

4   allocating at least a portion of a ticket, the portion being based on the monetary

5 value;

6   determining a prize value of the ticket; and

7   providing a portion of the prize value based on the allocated portion of the ticket.

1 24. An apparatus for facilitating the purchase of fractional lottery tickets using a

2 point-of-sale terminal, comprising:

3   a storage device; and

4   a processor connected to the storage device,

5   the storage device storing

6   a program for controlling the processor; and

7   the processor operative with the program to:

8   determine a monetary value;

9   allocate at least a portion of a ticket, the portion being based on the

10 monetary value;

11   determine a prize value of the ticket; and

12   provide a portion of the prize value based on the allocated portion of the

13   ticket.

1   25.   A method for facilitating the purchase of fractional lottery tickets using a point-

2   of-sale terminal, comprising:

3   maintaining a supply of tickets, each ticket having an unallocated portion thereof;

4   acquiring an additional ticket.

1   26.   The method of claim 25, in which the step of acquiring an additional ticket

2   comprises:

3   counting a number of tickets having an unallocated portion that is above a first

4   predetermined threshold; and

5   acquiring an additional ticket if the number of tickets having an unallocated

6   portion that is above the first predetermined threshold is below a second predetermined

7   threshold.

1   27.   The method of claim 25, in which the step of acquiring an additional ticket

2   comprises:

3   receiving an indication of a requested portion;

4   counting a number of tickets having an unallocated portion that is above the

5   requested portion; and

6   acquiring an additional ticket if the number of tickets having unallocated portion

7   that is above the requested portion is below a predetermined threshold.

1   28.   The method of claim 25, in which the step of acquiring an additional ticket

2   comprises:

3   acquiring a predetermined number of additional tickets.

1   29.   The method of claim 25, further comprising:

2   calculating a sum of the unallocated portions of the tickets.

1   30.   The method of claim 29, in which the step of acquiring an additional ticket

2   comprises:

3   acquiring an additional ticket if the calculated sum is below a predetermined

4   threshold.

1   31.   An apparatus for facilitating the purchase of fractional lottery tickets using a

2   point-of-sale terminal, comprising:

3   a storage device; and

4   a processor connected to the storage device,

5   the storage device storing

6   a program for controlling the processor; and

7   the processor operative with the program to:

8   maintain a supply of tickets, each ticket having an unallocated portion

9   thereof; and

10   acquire an additional ticket.

1   32.   The apparatus of claim 31, in which the processor is further operative with the

2   program to:

3   count a number of tickets having an unallocated portion that is above a first

4   predetermined threshold; and

5   acquire an additional ticket if the number of tickets having an unallocated portion

6   that is above the first predetermined threshold is below a second predetermined threshold.

1   33.   The apparatus of claim 31, in which the processor is further operative with the

2   program to:

3   receive an indication of a requested portion;

4   count a number of tickets having an unallocated portion that is above the

5   requested portion; and

6   acquire an additional ticket if the number of tickets having unallocated portion

7   that is above the requested portion is below a predetermined threshold.

1   34.   The apparatus of claim 31, in which the processor is further operative with the

2   program to:

3   acquire a predetermined number of additional tickets.

1   35.   The apparatus of claim 31, in which the processor is further operative with the

2   program to:

3   calculate a sum of the unallocated portions of the tickets.

1   36.   The apparatus of claim 35, in which the processor is further operative with the

2   program to:

3   acquire an additional ticket if the calculated sum is below a predetermined

4   threshold.

5

ABSTRACT OF THE DISCLOSURE

A store controller determines a monetary value, such as an amount of spare change due to a customer, and allocates a portion of a lottery ticket for the customer. The portion is based on the monetary value, and may be, for example, equal to the monetary

5   value, or may be the monetary value rounded to the nearest nickel. The store controller outputs a ticket identifier that identifies the lottery ticket (e.g. a serial number) and a portion identifier that identifies the allocated portion of the lottery ticket (e.g. $0.34 of a $2.00 lottery ticket). Typically, the store controller outputs the identifiers to a POS terminal, which prints a fractional lottery ticket redeemable for a portion of the lottery

10   ticket's prize. The store controller also stores the ticket identifier and the portion identifier, to assure that fraudulent tickets will be detected. After a drawing date of the lottery ticket, the customer redeems the fractional lottery ticket, typically at a POS terminal. The POS terminal communicates with the store controller, which receives the ticket identifier and the portion identifier therefrom. From the received identifiers, the

15   store controller may determine a prize value of the lottery ticket. The customer is in turn provided with a portion of the prize value based on the allocated portion of the ticket.

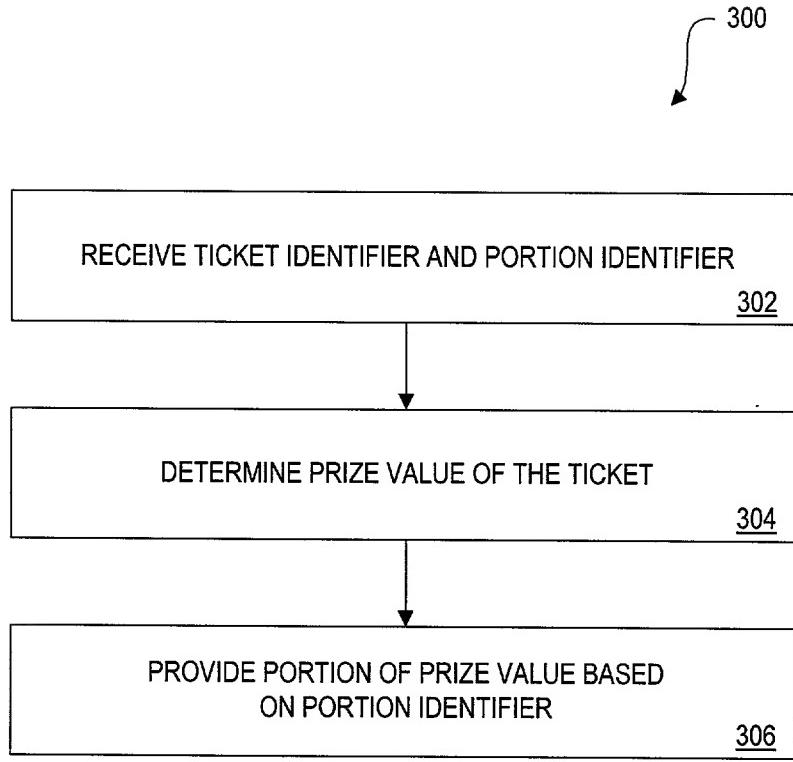

FIG. 13

COMBINED DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship is as stated below next to my name(s),

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

METHOD AND APPARATUS FOR FACILITATING THE PLAY OF FRACTIONAL LOTTERY TICKETS UTILIZING POINT-OF-SALE TERMINALS

the specification of which (*check one*)

    ☒   is attached hereto; or
    ❏   was filed on _____ as application serial no. _____ and was amended on _____ (if applicable); or
    ❏   was described and claimed in international application no. _____ filed on _____ and as amended on _____ (if applicable).

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above, and that it contains a full, clear, concise and exact description of the subject matter for which a patent is sought.

I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, § 1.56(a).

Prior Application(s)

    ❏   (Check if applicable) I hereby claim foreign priority benefits under Title 35, United States Code § 119, by checking the box(es) below, any foreign application(s) for patent or inventor's certificate, or PCT International application having a filing date before that of the application on which priority is claimed:

Prior Foreign Application(s)

Priority Claimed?

_____ ❏ yes   ❏ no
(Number)   (Country)   (Day/month/year filed)

_____ ❏ yes   ❏ no
(Number)   (Country)   (Day/month/year filed)

    ❏   (Check if applicable) I hereby claim the benefit under Title 35, United States Code § 120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code § 112, I acknowledge the duty to disclose material information as defined in the Title 37, Code of Federal Regulations § 1.56(a) which occurred between the filing date of the prior application and the national or PCT international filing date of the application:

Prior U.S. Application(s)

08/920,116	26 August 1997	Pending
(Application Number)	(Day/month/year filed)	(Status – Issued, pending, abandoned)

08/822,709	21 March 1997	Pending
(Application Number)	(Day/month/year filed)	(Status – Issued, pending, abandoned)

❑ (Check if applicable) In this continuation-in-part application, insofar as the subject matter of any of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code § 112, I acknowledge the duty to disclose material information as defined in the Title 37, Code of Federal Regulations § 1.56(a) which occurred between the filing date of the prior application and the national or PCT international filing date of the application.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge and the like so made are punishable by fine or imprisonment, or both under § 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

I hereby appoint Jeffrey L. Brandt - Reg. No. 31,490, Robert R. Lech – Reg. No. 37,169 and Dean Alderucci – Reg. No. 40,484 as my attorneys and Charles A. Rattner - Reg. No. 40,136 as agent of record, all of Walker Digital Corporation, whose address is Five High Ridge Park, Stamford, Connecticut 06905-1326 with full power of substitution and revocation, to prosecute this application and to transact all business in the Patent and Trademark Office connected therewith.

Please address all written correspondence to:

Walker Digital Corporation
Five High Ridge Park
Stamford, Connecticut 06905-1326
Phone (203) 595-2865
Fax (203) 595-8266

Wherefore I pray that Letters Patent be granted to me for the invention or discovery described and claimed in the foregoing specification and claims, and I hereby subscribe my name to the foregoing specification and claims, declaration, power of attorney, and this petition.

Full name of sole or first inventor: Jay S. WALKER
Residence: 124 Spectacle Lane, Ridgefield, CT 06877
Post Office Address: same as above
Citizenship: U.S.A.
Inventor's signature_____ Date_____, 1998

Full name of second inventor: Andrew S. VAN LUCHENE
Residence: 13-2a Clarmore Drive, Norwalk, CT 06850
Post Office Address: same as above
Citizenship: U.S.A.
Inventor's signature_____ Date_____, 1998
